

MAINTAINING  
A HEALTHY TANK

**CLASSICA**<sup>™</sup>  
By Arcadia

24 HOUR  
PLUG-IN-TIMER

Compact & Dual Day-Night Timer

## **Safety instructions**

- The timer is for indoor use only
- Do not touch the timer with wet hands
- If the equipment that you are controlling is attached directly to the aquarium, ensure the cable to the timer forms a drip loop (see diagram) to reduce the possibility of water transmission along the cable to the electrical socket
- Maximum current rating for any device connected to the timer is 13A at 250VAC
- If in any doubt about the use or installation of the timer, consult an electrician

# Programming and Operating Instructions

1. Ensure the timer is disconnected from the mains
2. Push down the time selector pins for the period for which you want the timer controlled appliance to be active – each pin corresponds to a 15 minute interval
3. Turn the timer dial until the pointer indicates the correct time
4. Plug in your appliance to the timer and then your timer to the mains socket, then switch the socket on
5. The timer can be overridden by moving the switch on the side to the on position

## Controlling Aquarium Lighting

Light in an aquarium is not only there for our benefit when viewing the tank, but it is also a vital energy source for aquatic plants and live corals. To support their growth and development an aquarium should receive a minimum of eight hours of illumination per day– even at times when you are not there to appreciate the lighting. Normally you should not exceed 12 hours illumination, as this may increase algae problems within the aquarium.

Most fish kept in tropical freshwater or marine aquariums, originate from areas where there is not a large seasonal change in day length. Using a timer allows your tank to have the same regular photoperiod throughout the year, with 'dawn' and 'dusk' occurring at the same times each day as they would in nature.

## ***24 Hour Plug-in-Timer***

- Compact day-night timer
- 15 minute interval setting
- For appliances up to 3KW (Max 13A)
